The PAIMM and the Galatea Clinic

The PAIMM as a Physician Health Program

- Highly specialized mental health service.
- Voluntary admission: informed consent.
- Free: sponsored by all Catalonia Medical Councils-Associations and the Catalonia Department of Health (CAT-SALUT).
- Highly confidencial: special procedure to mask real identity.
- Malpractice risk (<5%): therapeutic contract (mandatory treatment).
- Ethical guarantees.

Outcomes

Outcomes (2008-2016 Only BCN PAIMM)

- All admitted physicians completed the Intensive Phase (step 1 and step 2).
- 87.3% kept being monitored afterwards.
- 32.5% signed therapeutic contract with the Regulator.
- Mean length of treatment was 48 months.
- A total of 72.2% sick physicians remained abstinent at last contact.
- Good adherence to follow-up psychotherapy groups predicted both lower risk of lapse during treatment process and higher rates of abstinence at follow-up.

Psychotherapeutic considerations

Risk factors in Physicians

VULNERABILITY: Perfeccionism, poor self-esteem, high expectations, poor coping skill, high focus on status, narcissism, hypochondriasis, denial of own needs...
